Soothing Relief from;

- ✓ Dryness
- ✓ Itching
- ✓ Irritation
- ✓ Discomfort

WHAT IS VAGINAL DRYNESS

Vaginal dryness is a very common problem which is caused by a lack of natural moisture inside the vagina.

Itching, irritation and discomfort are also very common and tend to occur as a result of long term dryness.

WHAT CAUSES VAGINAL DRYNESS?

Vaginal dryness occurs during and after menopause but can also occur as a result of:

- ✓ Childbirth
- ✓ Breastfeeding
- ✓ Oral contraceptives
- ✓ Immune disorders
- ✓ Chemotherapy
- ✓ Hormone therapy
- ✓ At times of stress

Oestrogen helps keep the vagina moist and maintains the thickness of the vaginal lining. Vaginal dryness happens when the ovaries produce a decreased amount of oestrogen. This can occur at certain times in a woman's life, and may be permanent or temporary. Whenever oestrogen levels remain low (as they naturally do after menopause), the entire vaginal area tends to be dry both inside and out, which can lead to itching, irritation and discomfort.

Allergy and cold medications, as well as some antidepressants, can decrease the moisture in many parts of the body, including the vagina.

WHAT IS ACI-JEL® RESTORE

Aci-Jel® Restore is a water-based gel that is clinically proven to provide soothing, continuous moisture, giving relief from symptoms of vaginal dryness, atrophy, itching, irritation and discomfort.

Aci-Jel® Restore is a non-hormonal preparation and can be used in conjunction with systemic hormone replacement therapy (HRT).

Regular use of Aci-Jel® Restore , once every 3 days, can help maintain vaginal health and comfort by replenishing essential vaginal moisture before and after menopause.

Aci-Jel® Restore can be used with condoms. It does not contain spermicide and will not protect against pregnancy.

WHAT ARE THE INGREDIENTS?

Aci-Jel® Restore contains purified water and polycarbophil. Polycarbophil is a bio adhesive polymer which clings to the vaginal walls and serves to hold the lubricating water in place.

Aci-Jel® Restore also contains glycerol, mineral oil, hydrogenated palm oil glycerides*, carbopol 974P and sorbic acid.

Aci-Jel® Restore is paraben-free.

* Palm oil is sourced from sustainable sources, certified by RSPO.

HOW DOES ACI-JEL RESTORE WORK?

Aci-Jel® Restore works by lining the inside of the vagina, providing moisturisation, lubrication and comfort. The gel stays in place for several days allowing the purified water to be absorbed in the vaginal walls.

Step 1.

Aci-Jel® Restore coats vaginal tissues to provide instant relief to dry cells.

Step 2.

Aci-Jel® Restore delivers continuous moisture, which the cells absorb, causing them to regain their natural structure and elasticity.

Step 3.

Dead skin cells are naturally shed leaving the vagina both moisturised and rejuvenated.

To achieve best results, it is recommended to apply Aci-Jel® Restore in the morning.
